

Regional Priorities

- Should there be a unified inter-agency coastal habitat restoration approach to priority-setting?
- Should interagency priorities be set?
 - Should we id priority watersheds/regions across agencies?
 - Should we prioritize habitats across agencies?
- From the programs presented today, what are the best approaches for priority-setting?
- What other criteria/mechanisms should be used in priority-setting?
- What are the pros/cons of these criteria?

Restoration Research

- What are your program's key coastal habitat restoration research priorities?
 - Does your restoration research program assess functional success?
 - If so, how is functional success defined?
- What are possible mechanisms for coordinating our restoration research efforts (to avoid duplication and combine resources)?
- Do you have specific funding identified for research?
- Other.....

Performance Measures/Common Reporting

- When does your program consider acres to be “restored”? (e.g., at funding, after major implementation...)
- What other performance measures do you use?
- How do you use performance measures within your agency?
- Why don't some agencies use or have performance measures?
- Could we use performance measures to get a “common” message out?
- Have you been PARTed?

Next Steps for Coordination

- How can we achieve accountability in our coordination?
- Would IPAs be a useful coordination tool?
 - How could IPAs be used within your office/agency?
 - How should we begin to coordinate/identify opportunities for IPAs?
- How should we begin to coordinate identifying coastal habitat restoration priorities across agencies?
 - Should we start at the regional level?
- How can we use existing interagency workgroups to further our coordination efforts?
 - Is there a need for adhoc workgroups to address specific topics (e.g., restoration, priorities, research, etc.)
